Analysis of a zebrafish dync1h1 mutant reveals multiple functions for cytoplasmic dynein 1 during retinal photoreceptor development

Correction
After publication of our recent analysis of the zebrafish dync1h1 gene [1], we discovered a typographical error in the Methods. The sequence listed for the dyn1h1 ATG morpholino omits 2 nucleotides (in bold below).

The correct sequence is:

dyn1h1 ATG morpholino: 5'-CGCCGCTGTCAGA-CATTTCCTACAC-3'

The morpholino oligonucleotide that was synthesized and used for our studies was correct and the results were therefore not affected. We apologize for this typographical error.
