Historical Introduction to Big Basin Redwoods State Park

A map has a history of its own. Research on an old map can make it live and breathe again. A map can open windows to information like few other sources.

The “discovery” of the earliest (1912), detailed, map of Big Basin State Park, a park located (at the time the map was drawn) entirely within Santa Cruz County, California, has inspired this study of the history of the map, its maker, the people associated with the map, the reason for the map, the place names depicted thereon, and their meaning.

The story begins in Santa Cruz County, where redwood trees (Sequoia sempervirens, the coast redwood; from the Latin semper virens, always green) have grown for more than 2,200 years, and are the world’s tallest trees, one having reached 367 feet. The earliest white-man to see Redwoods was Juan Crespi, in 1769. Isaac Graham established the first sawmill in Santa Cruz County in 1842, harvesting the redwood trees for shingles.

The California Redwood Park [aka Big Basin Redwoods State Park] was established as the first redwoods state park in 1902, the earliest in today’s California State park system. The conservation movement in California had begun much earlier, however, and in 1864 Yosemite was made a State Park. Yosemite was established as a National Park in 1890.

Big Basin was saved from the threats to clear cut all the biggest trees through the efforts of many pioneers of Santa Cruz, Santa Clara, San Francisco counties, including one of the most prominent, Andrew Putnam Hill, a San Jose artist, photographer, and not unlike most artist’s, a man in quest of nature’s beauty.

It was an assignment to photograph redwoods for a London publication, Wide World Magazine, that took him to Welch’s Big Trees Grove at Felton, now Henry Cowell Redwoods State Park. At the time, 1899, the Grove was owned by Joseph Warren Welch, who established the Grove as early as 1867 as a tourist attraction. A. P. Hill became incensed at Welch’s insistence that he pay a fee for admission, and that no photographs be taken. Welch had an enterprise of selling his own photographs to tourists. Furthermore, Welch said he was going to have the big trees cut down. Whether this was his real intention or not, Welch’s statement was enough to spur Hill into action.

On Hill’s train trip back to San Jose, he resolved to save the redwoods. He drafted a letter to his friend, Josephine Clifford McCrackin, a Santa Cruz newspaper writer who knew most of the great literary figures of the day (Ambrose Bierce, Samuel Clemens, etc.). He wrote that “the thought flashed through [his] mind that these trees, because of their size and antiquity, were among the natural wonders of the world, and should be saved for posterity. I said to myself, ‘I will start a campaign immediately to make a public park of this place.’” Mrs. McCrackin’s article appeared in the Santa Cruz Sentinel on March 7, 1900.

In addition to campaign help from writers, Hill obtained help from both the San Jose and Santa Cruz Boards of Trade. John Frederick Coope, President of the Santa Cruz Board of Trade, while entirely supportive of Hill’s campaign, informed Hill of a suggestion made by a prominent Santa Cruz physician, Dr. Charles Lewis Anderson. Anderson was a naturalist by avocation, who had written a great deal on the climate, botany, and geology of the Santa Cruz Mountains. He pointed out that, while the redwoods at Felton were magnificent and important, the Big Basin contained larger trees in an area more suitable for a part. That launched further consideration by those interested in creating a redwoods park. Big Basin was favored by Stanford University professors, as well as David Starr Jordan, President of the University. It was, after all, closer to the Stanford campus and would be more accessible as a botanical laboratory for Stanford’s students and faculty.

A meeting was held at the Stanford University Library, May 1, 1900, at which attendees included Stanford professors, William R. Dudley, Professor of Botany, Charles B. Wing, Professor of civil engineering; University of California Professor J. H. Senger; Professor John J. Montgomery of Santa Clara College; and Professor James McNaughton, president of San Jose Normal School (now San Jose State University).
Out of this meeting grew an exploring expedition to the Big Basin, which took place two weeks later, May 15-19, 1900. It was on May 18th, around a campfire, that Hill proposed the establishment of a club dedicated to saving the redwoods. It was John Frederick Coope that named the club, The Sempervirens Club of California.

A campaign to create a park required a lobbying effort that became one of the great political success stories of all time. Although the California Redwood Park became a theoretical reality when Governor Henry T. Gage signed the California Redwood Park bill on March 16, 1901, it wasn’t until a year later that Hill’s dream would materialize when the Park Commission bought the initial 2500 acres. Today Big Basin Redwoods State Park is comprised of over 19,000 acres.

A Brief Cartographic History of the Park

Maps that depict the Park vary in content, depending on the purpose for which the map was drawn. The earliest cartographic depiction of the terrain were the so-called “township surveys” done by surveyors who secured contracts from the United States Surveyor General for California, beginning in 1851. The purpose of these surveys was to established the Section lines of the Land Survey system: the Township, Range, and Section grid system. Once that grid was laid down on paper, settlers could file a homestead claim and occupy the land.

All of the Big Basin was “public land,” compared to the Mexican land grants which occupied most of the non-forested, grazing and agricultural land in Santa Cruz County. “Public land” was mapped by the U.S. Surveyor General’s Office, and some information is provided by these early maps; however, the scale at which they are drawn does not permit the level of detail that one prefer.

The next series of maps covering the area of Big Basin are those based on surveys conducted by Thomas Wilson Wright, County Surveyor of Santa Cruz County. This mapping was done between 1880 and 1881. The purpose of this mapping was to depict the land-owners, their names and quantity of acres. Unfortunately, the mapping done of Big Basin, with its remote, mountainous, and difficult terrain, omits the depiction of many known features.

The earliest and most detailed mapping of Big Basin, mapping created for a particular purpose, other than to establish the exterior boundaries of the region’s Townships, Ranges, and Sections, is the “Map of California Redwood Park | The Big Basin | Santa Cruz County, California” created by civil engineer John E. Pope, of San Francisco.

The Pope map, sometimes referred to as the “Kenna Map,” is more fully described below. The description is followed by an itemization of the place names and the people associated with the map.

A letter (or report of twenty-nine pages) from John E. Pope to the Reverend James P. Morrissey, President of the University of Santa Clara, dated September 1912, upon completion of the map, reveals the purpose of the survey, and the origin of many of the feature names depicted on the map. This is quite rare, most maps are not accompanied by explanations. This letter, as well as additional sources, have permitted a relatively accurate history of this map.

In addition, the history of the map enables the researcher to learn more about the people of the Big Basin and Boulder Creek areas, the people associated with the creation of the Park, and for whom and what the features and places are named. A renewed appreciation for Big Basin and the beauty of our redwood trees has been gained.

Ah, for the stimulation of a good map!

Description of Stanford University’s “Pope Map”

Title: Map of California Redwood Park | The Big Basin | Santa Cruz County, California : Survey and map made May - September 1912. By John E. Pope, Civil Engineer, 422 Crocker Building, San Francisco. Field Assistants: Joseph H. Pope, Robert Dunlay.

Description: 1 map, 142cm x 100cm on sheet 152cm x 103cm (60” x 41”), drawn on coated linen, hand colored, [excellent condition, with a few pin holes in margins.]

Scale 600” = 1” [1 : 7,200] [appears with scale-bar at upper right]
[at lower right] Copyrighted by John E. Pope. [n.d.]
History of the 1912 “Map of California Redwood Park: The Big Basin” by John E. Pope

In 1912, John E. Pope created a map of the Big Basin, which was dedicated to the memory of Robert E. Kenna, S.J., President of the University of Santa Clara. The map was dedicated to Rev. J. P. Morrissey S.J. for his role in the preservation of the Redwood Park.

The map was dedicated to the memory of the esteemed and honored former Park Commissioner, the late Rev. Robert E. Kenna S.J. of Santa Clara, under whose instructions, the survey, and this map were made, and to whose zeal, and his unceasing and unselfish efforts, in a special manner, is due, the preservation of the gigantic trees of the "Big Basin," for the admiration, the education and the pleasure of the present and future generations. His heroic work in conjunction with the faculty of the Universities of Stanford and California, together with the members of the Sempervirens Club, and other citizens, in procuring this superb forest for the people, has truly earned for him the title of "Father of the California Redwood Park."

During my research on the “Pope” map, I visited Mimi Guiney, Park Ranger at Big Basin, to explore with her the possible existence of the “Kenna” map which Don Meadows [see his work cited in Bibliography] had referred to as being “In the Big Basin museum....” Ranger Guiney indicated that the museum had been renovated a few years ago. The map is not displayed there today, but, in a well-protected box in a locked room adjacent to the museum’s public exhibit, they do have three photo copies of the map. She suggested that the State Parks interpretative facility in Sacramento (in Old Town), might have an original from which these copies were made.

I also checked with Julia O’Keefe, University Archivist at the Santa Clara University Archives, where there are collections of University Presidents. She reported that there is “no copy of [the] Pope map in [the] SCU Archives.”

**Pope’s Letter to Morrissey**

What Julia O’Keefe was able to provide, however, was a most important and unusual document, a letter from John E. Pope, Civil Engineer and Surveyor (San Francisco), to Rev. James P. Morrissey, S.J., President of the University of Santa Clara. Pope’s letter is dated “September 1912” and coincides with the completion of his map.

In my experience, during three decades of map librarianship, I have found only one other example of a report, testimony, or clearly defined statement of the history of a map. Pope’s letter states the “object of this survey was to lay out a Boulevard encircling the Park, together with branches connecting this drive with the central part of these grounds in Governor’s Valley; also to outline new trails leading to the various points of interest; to locate possible dam sites, with the idea of making little lakes and ponds, to give suggestions for the further development of the Park in making it as attractive, as useful and as accessible as possible to the public, and at the same time to ascertain the approximate cost of this development work, and to have all these various features delineated upon a map which would show fully the works outlined together with all the natural features of interest to be found [in] the vicinity.”

Pope began his survey in May, 1912, “at the request of the late Rev. Father Kenna.” Kenna had died just a few weeks before. He makes a statement, on page 18 of this 29 page report, that reflects the philosophy of the period — although, the spirit of the statement is fairly consistent with today’s objectives: “The California Redwood Park is the people’s play ground; it belongs to the citizens of the State of California, and its hospitality is extended to the people of the world. It is a free camping ground....”

Pope concludes his letter to President Morrissey, that “the map I have dedicated to the
memory of Father Kenna under whose instructions it was made. The original drawing I have finished up in colors with the intention of presenting it to the Park, if such presentation be acceptable to the Commissioners.

Previous References to the “Pope’s Map” or the “Kenna Map”

Don Meadows, “during the four seasons (1946-49), [was] employed as Summer Naturalist in the Big Basin Redwoods State Park [during which, he] accumulated many historical and biological notes for use in preparing trail and campfire talks....” [Meadows, p. 1]

He published the result of his accumulation in 1950 as:

Meadows, Don
ii, 99 leaves, 28 cm., typescript

In this work, he expressed the view that “There is no adequate map of the Big Basin area available for public use. This lack should be remedied as soon as possible. I have used a blue-print map issued by the Division of Beaches and Parks as a source of reference. The map carries no date, but was probably issued sometime during the 1930’s. It too lacks a great deal of useful information.” [Meadows, p. 3]

I feel that his expression for a “adequate map” is related to the 1946-1950 period of his experience, rather than a reflection of inadequacy toward the “Pope” map of 1912.

Meadows, on p. 59 of his 1950 “Manual,” in the “Place Names” section, cites the “Pope” map as the:

Kenna Map and Highway.
In the Big Basin museum is a large map showing the lines of a proposed memorial highway to be constructed in the park in memory of Father Kenna of Santa Clara College, one of the first park commissioners. The highway never materialized, but the map is an important source of information for the time it was drawn in 1912.

In 1985, Steven Guiney, then a student of geography and environmental studies at California State University, Hayward, took a seminar in historical geography from Dr. Donald G. Holtgrieve. He chose to report on Big Basin Redwoods State Park and wrote a paper on the “cartographic history of the ... Park, with [use of all] the maps [that he could find] exemplifying the changing philosophy of park land-use ....” In his paper (unpublished) he classified the known maps that he found that depict the park, into two categories: exterior maps that emphasize acquisition of lands to be included in the park, and interior maps that reflect land use changes. Guiney found the “Kenna” map of 1912 to be the “first map of the California Redwood Park.”

Other Maps

I have found no other map, available to the average map user, as detailed as the “Kenna-Pope” map. In particular, if one is looking for the location of named features, such as “Father of the Forest” tree, you can’t find a map today that depicts that information.

The “Big Basin Redwoods State Park Map” [1:35,000] published by the Santa Cruz Mountains Natural History Association (July 1993) has a detailed inset map [1:21,000] of the Park Headquarters and vicinity, the site of a dozen-or-so individual trees or clusters that are named. However, none of the locations are given, not even approximate. Nor does the accompanying text provide any hint of these features.

There was, however, a map drawn in June 1940 for the California Division of Parks “showing the main features of Opal Creek Plateau.” This map shows the precise location of the principal trees near the Administration Building; e.g., Animal Tree, Cathedral Group, Chimney Tree, Compass Group, Daughter of the Forest, Father of the Forest, Leaning Group, Mother of the Forest, Perfect Tree, Santa Clara Tree, Santa Cruz Tree, Teapot Group, Washington Tree.

Place Names

John E. Pope, on page 25 of his letter to Rev. Morrissey, wrote some revealing comments about the place names on his map. He said that “it was the intention of Father Kenna that all points of interest
should be given names that they may the more readily be located and recognized. The unnamed streams, peaks, ridges, valleys, etc. should be specially designated, as a step in further development work, and that pioneer names as much as possible be used. A list of these he intended to give me during the progress of this work, but he was called from earth before this survey was very far advanced. I have therefore used the pioneer names at hand, filling in the remaining ones necessary, with names of surrounding counties, cities, universities, trees, etc. The chief ridges I have named according to location. Governor’s Valley is the name given to all the level ground in the vicinity of the original Governor’s Camp. One prominent peak has been named in memory of the late Professor Dudley of Stanford who was deeply interested in, and worked energetically for the success of the Park. Another has been named in memory of the late Rev. Robert E. Kenna, S. J. The Boulevard I have also called the “Kenna Boulevard” as it was his chief ambition in connection with the Park to have this great driveway built before 1915 if possible and that it should be first class in every respect. All during his long illness in the hospital, besides performing his various works of religious and educational character he always found time to devote to the Park. He was constantly working out ideas for its advancement, that the people might receive all the pleasure and education to be derived from it; and this work he continued until the very last; and the success of his labors along those lines have truly earned for him the title of “Father of the California Redwood Park.”

“His ideas and instructions in connection with the Boulevard and the map I have endeavored to carry out as closely as possible, and whatever success will follow from the survey, the map and this report is due to his suggestions, his enthusiasm and his interest in the California Redwood Park.”

There are approximately one-hundred-sixty (160) place names on this map, seventy-six (76) of which are described or mentioned by Donald T. Clark in his *Santa Cruz County Place Names* (1986). Therefore, over fifty percent (52%) are newly discovered names — not all of which will generate a new entry for a revision of *Santa Cruz County Place Names*, because they are no doubt generic names, e.g., “Big root tree.” The following lists, both alphabetical and classified, will help sort that out.

### Named Geographical Features in Alphabetical Order

Biographical Dictionary of People and Related Place Names

Barlow, Aurelius Thomas  [Barlow Road]

Also known as “Tom Barlow,” he was born in Maine. When he registered to vote in Santa Cruz County, July 1, 1867, he was 33-years-old. He removed to San Francisco on October 2, 1876.

“When Tom [Maddock] moved into the Basin a cantankerous individual named Tom Barlow lived at the cienega [“a wet place”] in front of the present Park headquarters. The place was then called Barlow’s Opening. When Tom Maddock started building his squatters cabin Barlow called on him and told him to get off the land as it was private property. Tom Maddock was six foot two inches tall and weighed around 240 pounds. Holding his Irish temper the best he could he escorted Barlow down Opal Creek to where he thought the boundary of his claim was located, then drawing a line in the ground, he told Barlow never to cross it, for if he did there would be a fight. For several years there after there was tension between the two men, but never an open conflict. The Maddock children were never allowed to visit the Barlow Opening. [Meadows, p. 17-18]

“Barlow Cabin and Opening

In 1906 or 1907 Elmer Crawford tore down a cabin located adjacent to the south-west edge of the big redwood crater located in the northern part of the cienaga [sic] in front of park headquarters. It was twelve by twenty feet in size with a lean-to roof in the rear, and faced south-west. It was constructed of split redwood planks. The building was known as the Barlow cabin, and the cienaga [sic] as Barlow’s Opening.

A. Thomas Barlow was a laborer living in Santa Cruz in 1876. In that year, or the following one, he went into the Basin to homestead land for the Porter Brothers, and built the cabin mentioned. He was well established when Tom Maddock took up his claim, and the meeting between them has already been described. (pg.17) Barlow has been characterized as both friendly and cantankerous, depending upon the narrator. He was still living in the cabin in 1887 and was then about 50 years old. A road, known as the Barlow Road, ran from the cabin north-east up the hillside more or less along the line of the present high-
way. The terminus of the road or its purpose is not known. Signs of the road can still be seen near the rest room back of the post office and store.” [Meadows, p. 47-48]

**Barlows Opening** A marshy meadow near the present-day headquarters of Big Basin Redwoods State Park in the NWQ, Section 8, T9S, R3W. Thomas Barlow, a native of Maine who settled in Santa Cruz in the 1860s, homesteaded land and built a cabin in the area in 1876 or 1877. “A road, known as Barlow Road, ran from the cabin northeast up the hillside more or less along the line of the present highway.” —Meadows (1950, p.24).” [Clark, p. 17]

**Berry, Tilford George** [Berry Creek; Berry Creek Falls; Berry Falls Trail]

“Berry Creek is one of the principle [sic] tributaries on the west side of the west branch of Waddell Creek. It was named for an old lumberman, probably an employee of Waddell, who had a cabin near the base of the lower falls in the creek. “Old Man” Berry used to visit the Maddock cabin when Mrs. [Alice] Newman was a girl. He disappeared, and years later his bones were found in the chaparral above Boulder Creek. Tom Maddock recognized the body through the presence of a shot gun that Berry had owned. The body was found in the 1880’s.” [Meadows, p. 48]

“**Berry Creek** There are two creeks, some 6.5 miles apart, with this name; both in the northwestern section of the county; neither is named for a berry.

1. This stream rises in San Mateo County in Section 36, T8S, R4W, and flows southward into Waddell Creek in the NEQ, Section 11, T9S, R4W; length about two miles. “It was named for an old lumberman [Tilford George Berry], probably an employee of Waddell, who had a cabin at the base of the lower falls in the creek.... He disappeared, and years later [1890] his bones were found in the chaparral above Boulder Creek.” —Meadows (1950, p.24). Berry, a native of Indiana, homesteaded near the creek in the middle 1860s. [Clark, p. 27]

- The Great Register of Santa Cruz County, 1866-1875, shows Tilford Berry as a 40-year-old, laborer, born in Indiana, residing in the Soquel township, who registered to vote on August 9, 1873. His registration was not canceled as late as 1875.

dead of Tilford G. Berry
  “Bits From Boulder”
  .... About eight years ago an old resident of Boulder Creek, known as “Old Man Berry,” disappeared from the town and all trace of him was lost. A few weeks ago the blanched skeleton of a man was found in the sandy ledges overlooking the town on the north side of the creek, and from the rifle found near him, the contents of his pockets, which lay scattered about, and the size of the skeleton, the remains were fully identified as those of the long missing man. Berry was a very tall man, six feet four inches in height, and his head was unusually large. The skeleton found, which is now in the possession of Boulder Creek’s local druggist, corresponds in these particulars with the description of the man, and as has been said, the rifle found lying by its side has been fully identified. How the man came by his death is a mystery, but those who know him best are of the opinion that he became tired of life and sought this lonely spot to end his existence. In the decayed clothing was found a fragment of the San Francisco Figaro, dated May, 1882, the year of the disappearance of the man. The name of the missing man was Tilford G. Berry, and he came from Indiana.

**Bloom, Irvin Thompson** [Bloom Creek; Bloom Creek Trail; Blooms Mill]

“**Blooms Creek** A stream that rises in the NEQ, Section 16, T93, R3W, and flows westward past the site of Blooms Mill into East Waddell Creek in SEQ, Section 7, T9S, R3W. Named for Irvin T. Bloom, a Pennsylvanian who arrived in Felton in the winter of 1879 and who acquired a claim in 1897 on the creek to which he gave his name. Here over the years between 1901 and 1905, he built a store, saw mill, warehouse, blacksmith shop, and a cabin, most of which were destroyed by fire in 1905.” [Clark, p. 34]
“Bloom Creek, .... It was named for Irwin T. Bloom who had a timber claim and mill near its upper end.”  [Meadows, p. 49]

“Blooms Creek Trail” A relatively short trail in Big Basin Redwoods State Park that runs from Pine Mountain Trail to East Ridge Trail paralleling Bloom Creek from which it takes its name.  [Clark, p. 34]

“Blooms Mill” The area around I. T. Bloom’s saw mill, located on the north bank of Bloom Creek 100 yards south of the south entrance to Big Basin Redwoods State Park, took on the name Bloom Mill.  The site, in later years, became known as Old Park Mill and Park Mills.  [Clark, 34]
[see also: Clark’s entries for Bloom Grade & Bloom Creek Campground]  
[Perhaps Pope’s label for “Park Mill Trail” [NE 1/4 of SE 1/4, Section 8, T9S, R3W & NW 1/4 of SW 1/4, Section 9, T9S, R3W] is the same as Blooms Creek Trail.]

“Bloom’s Mill. Also known as the Old Park Mill, was located on the north bank of Bloom Creek about 100 yards south of the south entrance to the park.

“In 1897 I. T. Bloom, who owned a store and saw mill in Boulder Creek, acquired 320 acres of timber land at the head of a tributary to Waddell Creek, and a year later built a road from the Sequoia School district up a canyon and around the head of Little Basin to the property.....

[The mill operated from April 1902 until it was completely destroyed by fire on September 26, 1905. He rebuilt and “the Old Park Mill” operated from February 1906 until it was moved to Gazos Creek in March, 1909.]  [Meadows, p. 49-50]

Irvin T. Bloom died August 9, 1935 at the age of 79 and is buried with his family in the Santa Cruz Odd Fellows Cemetery.

Middleridge

Middleridge Fire Road runs north and south from Hihn Hammond Road in the South to Johansen Road in the north. Formerly known as Hollow Tree Camp Trail (undated map of California Redwood Park, probably 1915-1927) "Ranger Don Friend"

Source: Big Basin SP Hdqtrs. binder “Place Names”

Dool, William H.

William H. “Billy” Dool, born in Canada, was naturalized in Santa Cruz County on September 28, 1888 [Clark, p. 98]. He was a butcher and owned the W. H. Dool & Co. Meat Market located on Central Avenue [Clark, p. 98], Boulder Creek; in 1897 he also opened a meat market in Ben Lomond. He retired in 1902 when he sold a half-interest to A. H. Stagg, who in 1906 bought Dool’s interest.

In 1911 he was Postmaster of the Redwood Park Post Office, which had been established on January 24, 1907, after Mrs. J. H. B. Pilkington applied for a post office to be located at “Governor’s Camp in California Redwood Park.” [Clark, 292]

Dool served as a trustee of Boulder Creek...
Dool was appointed Warden of the California Redwoods State Park on March 20, 1911 and served 17 years, until 1932, when he died at the age of 72. [Clark, p. 98].[Meadows, p. 44]

Dool Trail, connecting Middle Ridge Fire Road with the Opal Creek Trail section of the Skyline to the Sea Trail, in Big Basin Redwoods State Park, is dedicated to his memory.

Dudley, William R.  [Dudley Peak]

Professor of botany, Stanford University. He attended the initial meeting at the Stanford University Library, May 1, 1900, called by Dr. David Starr Jordan, president of Stanford University, to “crystallize sentiment” for preservation of the Big Basin [DeVries, p. 21-22]. “Stanford professors Dudley, Marx, Smith and Wing had already explored the Big Basin region and had made maps and a survey of the area.” [DeVries, p. 21-22]. [See Dudley pictured with other attendees to May 1st 1900 meeting at Stanford, [DeVries, p. 25].

Dudley spoke before the California Legislature’s Committee on Public Lands and Forests, in January 1901, urging the passage of a Bill to purchase a redwood park. After the passage of AB 873 by both the Assembly and Senate, a public hearing was called by Governor Henry T. Gage [1899-1903] and the Sempervirens Club. “Speaking for the scholars and scientists were Professors William Dudley of Stanford and J. H. Senger of the University of California. Both scholars sought the preservation of the park area as a natural wilderness. Professor Dudley was strongly in favor of the park because of its unlimited value as a botanical garden. If the Basin were designated as a state park, protected from loggers and developers, it could still be utilized by Stanford students as a natural study area.” [DeVries, 37].

Governor Gage, with overwhelming public support, signed the California Redwood Park bill on March 16, 1901. The Bill called for the appointment of four commissioners, with himself as Ex-Officio. He appointed Dr. William R. Dudley, head of the Botany Department at Stanford University, as one of the four Commissioners.

In June, 1913, the Sempervirens Club held a gala banquet in San Jose, just a few days after the June 7, 1913, passage of the bill appropriating funds for the construction of the first road access from Saratoga Gap in Santa Clara County to the Big Basin. Four people were singled out for honors, Josephine Clifford McCrackin, the Santa Cruz Sentinel newspaper-woman and writer, the late Rev. Robert E. Kenna, who had served on the Redwood Park Commission [he died in 1912], Andrew P. Hill, the “foremost figure, night and day, in the movement” to save the redwoods, and Professor William R. Dudley of Stanford University, “who had given so much of his experience and advice to the project.” [DeVries, p. 58-59].

Inspiration Point  [aka Observation Point]

Source: “Place Names” binder, Big Basin SP Hdqtrs. 'OBSERVATION POINT  Called Inspiration Point on the Kenna Map. An open, rocky point a hundred yards off the Pine Mt. Trail about a quarter of a mile before the summit of the mountain is reached. Elevation 2150 feet. The finest view of the Big Basin may be seen from this point.” “Don Meadows Report”
Kelly, Thomas McElbee

- A teamster, from Pennsylvania, Tom Kelly was 39-years-old when he registered to vote on August 3, 1867, in Santa Cruz County. [Great Register of Voters #1691 - 1866-1875 manuscript Register, (Located at Santa Cruz County Historical Trust Archives)]

- Great Register of Voters, 1882: #1557 Kelly, Thomas M. (“M” not defined)

- He was an early settler in Boulder Creek. He died in San Benito County, March 11, 1901. [Mt. Echo 1901-03-16 3:1 & 5:3]

- “Kelly Creek” A small, short stream that rises in Big Basin Redwoods State Park in Section 7, T9S, R3W, flowing westward and joining West Branch Waddell Creek in Section 11, T9S, R4W. Named for Dr. Thomas Kelly [sic] who took up a timber claim in the area in the 1870s; here he built a cabin which became a well known rendezvous for hunters.

  Dr. Thomas Kelly [sic], for whom the well known place in Big Basin known as the Kelly Cabin, was found dead in his bed in San Jose Wednesday morning, February 14, 1906. He had been a surgeon in the Civil War and was aged 70 years. — Mountain Echo, February 14, 1906

Maddock, Thomas

- Maddock Cabin
- Maddock Cabin Trail
- Maddock Creek [Maddocks Creek]
- Maddocks Creek

- “Maddock House” A very small stream that rises in Section 31, T8S, R3W near Ocean View Summit in Big Basin Redwoods State Park; a tributary to Opal Creek. Named for Thomas Maddock who was born in Ireland in 1849, moved to California in 1870, settled in Marin County as a dairyman before moving to Santa Cruz County where in 1882 he built a squatter’s cabin on Opal Creek in what is now Big Basin Redwoods State Park at the confluence of Opal and Maddocks creeks. Here he hauled lumber, harvested tan oak bark, and produced split stuff. He died in September, 1920.” [Clark, p. 194]

According to Big Basin Park Ranger Mimi Guiney, Tom Maddock’s wife’s name was Alice.

McAbee [Macabee Trail]

• Source: “Place Names” binder, Big Basin SP Hqtrs. [Morris Report 4/92]:

“McAbee Overlook and MT McAbee
A cone like peak, 1820 feet in altitude, separating the two forks of Wadell Creek. The Hihn-Hammond Road goes to within one hundred feet of it’s summit before dropping down toward the forks. The mountain was named for the McAbee brothers who had a timber claim on its northern slope.” “Don Meadows Report”

“Mount McAbee Overlook aka: Wheat Overlook
“A vista point on Hihn-Hammond Road (and Howard King Trail) near summit of Mt. McAbee (2.1 miles from Blooms Creek Campground).”

Middleton, Henry Louis
Vice-President, Santa Clara Valley Mill and Lumber Co., and a Park Commissioner at the time the Pope map was created, Middleton figures prominently in the history of Big Basin. Carolyn DeVries’ account provides a fairly complete picture of his role in various capacities.

Middleton was the “largest stockholder in the Big Basin Lumber Company” when he joined an expedition into the park — “Mr. Middleton had become inoculated with the spirit of this redwood-saving crowd...” and in spite of his company’s plan to begin cutting these giant redwoods, he “proved himself eager to help save the redwoods by assisting the men in obtaining an option for one year on 14,000 acres in the Big Basin area.” [DeVries, p. 28]

Opal Creek
“Present name of the East fork of Waddell Creek ... known as Big Creek in the early days. Aptly named for the opalescence of the water, caused by the leaching of tannens from the branches of fallen redwoods. The stream is sluggish so the opalescence is noticeable.” “Don Deadows Report.”
“Shown as Maddock Creek on the 1915 Rodger’s Map.”
Source: “Place Names” binder at Big Basin SP Hdqtrs.

Paschall, Lavisa Ellen (Mrs. Dennis Potter Paschall)
[Paschal Cabin Trail, Paschal Creek]
“Paschal Creek
Name applied to the extreme upper end of the west fork of Waddell creek. Named for Mrs. D. P. Paschall [Dennis Potter Paschall] who had a cabin on the creek about a quarter of a mile north of the upper limits of Maddock’s creek. The cabin burned down during the 1936 fire.”

“D. P. Paschall was a blacksmith and veterinarian who came to Boulder Creek with his wife and family in 1882. He drank to excess and was divorced by Mrs. Paschall. Sometime in the 1880’s Mrs. Paschall took up a timber claim around the head of Waddell creek and built a cabin near the stream. While proving up on the land Mrs. Paschall ran a boarding house in Boulder Creek and would make regular trips to her mountain claim. As a girl, Mrs. [Alice] Newman remembers Mrs. Paschall visiting the Maddock cabin while on her way in to the cabin. The Maddock Trail was followed to reach the upper end of Waddell creek. W[illia]m Dool, third warden in the park, married one of the Paschell girls. Mrs. Paschall died in Santa Cruz, April 15, 1909.” [Meadows, 63-64]

  FUNERAL OF MRS. LAVISA PASCHALL

Mrs. Lavisa Paschall, who for forty-seven years has resided in California, died yesterday at her home in this city. Nearly all of her life in California had been spent in Santa Cruz and Boulder Creek, where
she has been well known, as for many years she was in the hotel business and was in charge of the Wildwood Home at Boulder Creek. She was the proprietor of a rooming house in her later life.

She was 68 years of age, and a native of Indiana. She leaves children as follows: Mrs. Alice Meek, Gazelle, Siskiyou county; Mrs. Louis P. Braddy, San Francisco; Mrs. May Howell and Mrs. Emma Dool, Boulder Creek, and Dennis [F.] Paschall of this city.

She was prominent as a church member and temperance worker all her life, and was one of the mainstays at Boulder Creek in the Methodist Church, and on coming to Santa Cruz united with the local church.

In the W. C. T. U. and Good Templars she also was very energetic and a ardent worker.

Rodgers, Winfield Scott
- Rodgers Creek, and Rodgers’ Gulch
  [Clark, Santa Cruz County Place Names p. 301]: “Rodgers Creek” It was named for Winfield Scott Rodgers, editor of the Boulder Creek Mountain Echo.

“Rodgers Field” Located on the Rancho del Oso section of the Skyline to the Sea Trail. It was named for Elwyn [i.e., Elwin] Rodgers, surveyor in Santa Cruz County in the 1910s and 1920s, who had a nursery at this place in the 1920s and 1930s.—Personal communication -Hulda Hoover McLean.

“Rodgers Gulch and Road” were named for Winfield Scott Rodgers.

“Rodger’s Gulch was the name applied to the extreme upper end of Union Creek. When W. S. Rodgers built a road down the canyon from the China Grade in 1895 to join the wagon road leading to slippery Rock. Tan Bark was hauled over the Rodgers road. Now the location of the Park shops. Sometimes spoken of as Garbage Gulch, since garbage incinerators were located in the canyon.
Rodgers Creek. The first creek entering Opal Creek from the West above Maddock’s Creek. Prior to 1895 it was known as Lion Creek, probably a misspelling of Lyons, for a man by that name had a timber claim around the creek at that time. It was the site of several buildings and cabins built by W. S. Rodgers in 1895 to provide shelter for tan bark crews which he employed in the locality. The buildings were destroyed in the fire of 1936. [Don Meadows]

see also Clark, Donald Thomas Santa Cruz County Place Names (1986) p. 374-375.

The origin and naming of Trail Beautiful is cited by Clark, as explained by Winfield Scott Rodgers in his Editorial in the Mountain Echo, July 23, 1904.

[Compilers’ Note: should the following similar names be for Rodgers?):

  “Rogers Meadow: A grassy hillside on Rogers Road where it intersects with East Ridge Road. A past repeater site.”
  “Roger’s Road is shown as “Bull Springs Cut Off” on the 1915 Rodgers map.”
  “Rogers Road: A road that exits Lodge Road (Sky Meadow Road) just below shop complex, passes by shop complex, boneyard and continues up a steep grade by Rogers Meadow and enters onto South China Grade 0.2 miles south of North Hwy 236.”

Sempervirens Creek, Sempervirens Falls, Sempervirens Summit, ... Trail

All named for the trees, the Coast Redwood Sequoia sempervirens, that were the object of efforts by the Sempervirens Club of 1900 to save them and the land for a State Park - later known as Big Basin Redwoods State Park, established by an Act of the California Legislature in 1902.

also Sempervirens Camp

“Sempervirens Camp on the flat a few hundred yards above the falls, at the foot of Slippery Rock was named after the Sempervirens Club. The camp was actually the old Sinnott house. Sinnott was Maddock’s brother-in-law.” Source: “Place Names” binder, Big Basin SP Hdqtrs [Meadows Report]
opening in the woods near the present Gazos Creek road. Like many of the mountain men, Timm was a hard drinker, and occasionally had delirium tremens. In 1883 or 1884 he disappeared, leaving the Basin’s greatest mystery behind him. Three different stories concerning his disappearance have been told me [Meadows], all pointing to murder, but none of them have sufficient factual evidence to warrant placing a cloud on the memories of certain people who lived in the Basin area. Timm’s cabin was wrecked by a falling fir tree in 1900 and completely destroyed in the 1936 fire.” [Meadows, p. 68]

**Trail Beautiful**

“Built in the summer of 1893 from the Lyon’s tract (now Commissioner’s Grove) to Slippery Rock, to haul tan bark out.” Source: “Place Names” binder, Big Basin SP Hdqtrs [Meadows Report]

**see also Rodgers, Winfield Scott** (ibid.) and Clark, Donald Thomas *Santa Cruz County Place Names* for the origin and naming of **Trail Beautiful**.

**Trays, Joseph** [Trays Old Road; Trays Ranch; Trays Ridge]

“**Trays Ridge** A ridge in the Santa Cruz Mountains in Section 33, T8S, R3W, now within the boundaries of Big Basin Redwoods State Park. Named for **Joseph Trays** who homesteaded in the area. Trays, born in England in 1843, was naturalized in Santa Cruz County and registered to vote in Boulder Creek precinct. At his ranch on the ridge he planted a vineyard and raised chickens. He died, February 6, 1931.” [Clark, 375]

“**Trays Ranch** A private ranch contiguous to Big Basin along North China Grade p. m. #4.25.” Source: “Place Names” binder, Big Basin SP Hdqtrs [Morris Report 4/92]

**Union Creek & Union Creek Mill, Union Mill Road, Union Creek Trail**

It takes its name from the Union Mill that was built there in 1895 by the Boulder Creek Land and Lumber Company. It was completely destroyed by fire on September 7, 1904. *see* Meadows, p. 70.

**Waddell, William White**

[Waddell Creek and its forks/branches]

“Named for William White Waddell who was born in Kentudky on January 31, 1818. He mi-

grated to California from Lexington, Missouri, in 1850 and arrived in Santa Cruz County in 1851 where over a number of years he built saw mills in four different places. The first was Blackburn Gulch where he operated until 1860. Two others were built at Rincon and Williams Landing. The final location was along the creek that now bears his name. Here in 1861 he built a mill, a tramway, and a wharf; the mill burned in 1864; this was followed by another which burned in 1883. Waddell died in 1875 of injuries resulting from a bear attack.” [Clark, p. 390]

**see also** Waddell Beach, Waddell Bluffs, Waddell Creek, Waddell Gorge, Waddell Gulch, Waddell Post Office, Waddell Slide, *all in* Clark, pgs. 390-392.

**Woodwardia Falls**

A low falls on Waddell Creek about 200 yards below the sewage disposal plant. One is surrounded by woodwardia ferns and very beautiful, but spoiled by the 1948 fire. [Meadows Report]

The falls no longer exist. They were silted in by erosion [sic] that resulted from the 1948 fire and the logging in the 1960s. The trail leading to the falls was discontinued in the early 1970s and was almost obliterated in places as a result of the 1974 storm. [Ranger Dan Friend, ca. 1975]

The falls have now cleaned themselves out and approval has been given to re-open the trail. [Ranger John Harbison, Feb. 1982]

**Acknowledgments**

It is my great pleasure to acknowledge the assistance of those persons without whom this presentation would have been impossible.

**Joseph K. Herro**, Map Librarian, Branner Earth Sciences Library, Stanford University — It was his initial discovery of the Pope map at Stanford University that triggered this study. As a result of the 1989 Loma Prieta Earthquake, Stanford University’s Green Library had to be closed because of the extensive structural damage. That library’s Central Map
Collection had a container full of maps, rolled up because they were too large for standard map cases. An administrative decision to merge the Central Map Collection with the Branner Earth Sciences Library’s map collection, eventually brought the container full of rolled maps and “JK” together.

Knowing my interest in Santa Cruziana, “JK” informed me about “a Big Basin map by Pope.” He wanted to know if I had ever seen it. Further investigation led me to conclude that I hadn’t heard of it, nor was it reported among any of the University of California map collections. He kindly offered to loan the Pope map to me for copying. That led to this research project.

In my description of the map, I have noted the handwritten pencil notation on its verso, top margin, “Rev. Jas. P. Morrissey s j.” I speculate that this copy (the Stanford University copy) is the original map to which John E. Pope referred in his letter to Morrissey: “The original drawing I have finished up in colors with the intention of presenting it to the Park, if such presentation be acceptable to the Commissioners.” [The Stanford copy is hand colored.] Rev. James P. Morrissey, President, University of Santa Clara, was a Member of the Park Commission, and so was Charles B. Wing, Professor of Botany at Stanford University. One must assume that the two worked together closely. The map may have been presented to Rev. Morrissey, along with Pope’s report, then transmitted to Professor Wing at Stanford.

No matter how or when the transfer took place, J. K. Herro’s sharp eyes, and courtesy, have resurrected our attention to the history of this map, and Big Basin as a welcome foray into one of our most beautiful natural treasures.

Julia O’Keefe, University Archivist, Santa Clara University, from my initial contact, was very interested in, and instrumental, to my research. She found the Pope letter — the Rosetta stone — which unlocked answers to the mystery of why the map was drawn, and who named many of the features depicted on the map.

Mimi Guiney, Park Ranger at Big Basin, provided access to the few maps that are maintained at the Big Basin Park Headquarters, and loaned me a “Place Names” binder containing a compilation of definitions (most of which are derived from Don Meadows’ work in 1950). She also loaned for copying the 1940 map by the California Division of Parks “showing the main features of Opal Creek Plateau.” The most amazing coincidence, however, is that her husband, Steven Guiney, in 1985, a student of geography and environmental studies at California State University, Hayward, took a seminar in historical geography from Dr. Donald G. Holtgrieve. He chose to report on the Big Basin Redwoods State Park and gave a presentation on the “cartographic history of the ... Park, with [use of all] the maps [that he could find] exemplifying the changing philosophy of park land-use ....” I was able to borrow his notes and verify that he, too, found the Pope-Kenna map of 1912 to be the earliest to show detailed information as no other map had. I do appreciate his kindness in sharing his research.

Kathy Rehm Switky, Assistant Director of Development, Sempervirens Fund, Los Altos, enthusiastically provided support for this presentation by permitting a search of its photographic collection, and loaning slides of historic photographs and maps for use in my presentation. It was photographer Alexander Lowry, well known for his Big Basin scenes, who suggested the Sempervirens Fund as a source from which I might borrow material.

The names of newspaper indexers, unknown to me, would be included here if possible. Therefore, I will give credit to the Boulder Creek Branch, Santa Cruz City-County Public Libraries, for maintaining its index file to the Boulder Creek newspaper, Mountain Echo, which was published between October 1896 and Christmas-time 1916. The index may be searched for personal names, and subjects. The newspaper has been microfilmed, so access to information about Big Basin and the people involved in its history may be easily discovered. The film is in both the Boulder Creek Branch as well as the Central Branch (Santa Cruz).

The names of newspaper indexers, unknown to me, would be included here if possible. Therefore, I will give credit to the Boulder Creek Branch, Santa Cruz City-County Public Libraries, for maintaining its index file to the Boulder Creek newspaper, Mountain Echo, which was published between October 1896 and Christmas-time 1916. The index may be searched for personal names, and subjects. The newspaper has been microfilmed, so access to information about Big Basin and the people involved in its history may be easily discovered. The film is in both the Boulder Creek Branch as well as the Central Branch (Santa Cruz).

And, finally, but not the least important person, I extend my continuing admiration for the late Donald Thomas Clark, University Librarian Emeritus, UCSC, and for his Santa Cruz County Place Names. If the Pope-Kenna map had been “found” during the years of his research, he would have been able to include some of the information that I have now been
able to compile. However, I know he would not have chosen to include most of the generic names that appear on this map, but the more prominent features would surely have excited his curiosity. He would, for example, been able to provide an answer to the question he raised (p. 246) about the origin of this name: “So far I have not found this name on any other map and its origin escapes me.” Nevertheless, his Santa Cruz County Place Names provided the framework for this study, and the inspiration.

“History of the Map of California Redwood Park | The Big Basin | Santa Cruz County, California: Survey and map made May - September 1912. By J[ohn] E. Pope”

12 photos borrowed, shown courtesy of Sempervirens Fund.

1. V D 43 Antique/Historic
   Caption: “Photographs by Andrew P. Hill circa - 1900”

2. V D 42 Historic
   Caption: “Andrew P. Hill and the ‘Father Tree’”

3. V D 122 Antique/Historic
   Caption: [woodsman with axe lying in cut of tree]

4. V D 118 Antique/Historic

5. V D 54 Historic
   Caption: “McAbee’s Mill — Two Bar Creek” [not in “original” Big Basin, but shown to illustrate typical saw mill & McAbee as place name]. “Courtesy Santa Cruz (SC) Co. [sic] Museum. Non- Commercial use only.”

6. II E 8 Buildings
   Caption: “Uncle Billy’s Cabin - Deer Creek CRSP Sept. 73” [not in “Original” Big Basin, located in Castle Rock State Park, shown to illustrate cabin & Uncle Billy as place name]

7. V D 27 Antique Photo — Hist. Preser. #8
   Caption: “Early members of the Sempervirens Club in front of the ‘Father Tree.’ The photographer is seated in the center.” “c 1902 Sempervirens Gathering.”

8. V D 20 Historic
   Caption: “Hill Studio Morning at the Compass Group. Hand colored.”

9. II D 18 Road
   Caption: [scene of redwoods alongside road in Park]. Photo by Alexander Lowry, Sep. 73.

10. IV C 20 Map
    Caption: “1900”

11. IV C 24 Map
    Caption: “1902-1936”

12. IV C 74 Map
    Caption: [modern setting of Big Basin, San Francisco Peninsula, San Jose area, Santa Cruz County]

The following photos are supplied by the speaker, taken by UCSC Photo Lab, of the “Pope Map.”

13. Map of the California Redwood Park. [full view]

14. (same). [view of NW quarter]

15. (same). [view of NE quarter]

16. (same). [view of SW quarter]

17. (same). [view of SE quarter]

18. (same). [view of detail of info. block: Dedication to Kenna]

19. (same). [view of detail of Governor’s Valley]
