IMMUNOLOGY

The undersigned authors wish to note the following: “Upon rederivation of the gck-/- mouse line, we have been unable to reproduce the data showing that disruption of gck impairs PAMP activation of JNK and p38. We also cannot reproduce the finding that administration of PAMPs leads to the signal-dependent stabilization of endogenous GCK. Inasmuch as these signal transduction findings supported a central conclusion of the above article, we wish to retract this article in its entirety.”
