An x-ray streak camera with high resolutions in temporal and spatial dimensions has been developed. A temporal resolution of 400 fs and a spatial resolution of 25 μm have been achieved for 25 μm gold (Au) photocathode. The high temporal resolutions in temporal and spatial dimensions can be retained in a wide 53.36 ps time range. A temporal resolution of 233 fs and a spatial resolution of 11 μm have been demonstrated for 10 μm Au photocathode.
